Filed: April 14, 2005	Examiner: J. Buckle, Jr.
For: CONCRETE FILLABLE FORMWORK WALL	<b>VIA EFS WEB</b> Conf. No.: 8426

**Update on Copending U.S. Patent Application**  
**Serial No. 10/531,622 for "Insert Panel For**  
**Concrete Fillable Formwork Wall "**

Commissioner for Patents  
P.O. Box 1450  
Alexandria, VA 22313-1450

Dear Sir:

In Applicants' Information Disclosure Statement of September 12, 2005, Applicants identified Application '622 as also filed by Applicants. Both this application and that Application '622 claim priority from the same Provisional Patent Application 60/419,469.

Application '622 with claims directed to the insert panel with male engagement portions to mate with the female engagement portions of the elongated octagonal tubular form element of this application has been examined again, and Applicants have responded on July 31, 2008 to the Final Rejection made by Examiner M. Safavi with amendments and remarks to overcome rejections using U.S. Pat. Nos. 5,860,262 (Johnson); 5,740,648 (Piccone); and 6,167,669 (Lanc).

Applicants chose to pursue two separate patent applications, one for the tubular form elements of this application and the other for the insert panel, for reasons unrelated

to patentability. Applicants reserve the possibility of filing a continuation application to claim the united structure of insert panel on adjoining tubular form elements.

The Office is encouraged to arrange Examiners Safavi and Buckle, Jr. to review each other's examination activities, using PAIR and other mechanisms, and contact the undersigned with any questions either may have.

Respectfully submitted by:
